(Female Canine) Breakdown of costs involved(Excluding GST)	SMALL Canine <5kg	MEDIUM Canine (5-15KG)	LARGE Canine (15-25KG)	EXTRA LARGE Canine >25kg
Sterilisation	\$200	\$220	\$250	\$300
Anaesthesia <i>(GA Induction & Isoflurane)</i>	\$90	\$100	\$100	\$130
Sterile Surgical Pack & Suture Set	\$38 per suture and surgical pack, with typically 2–4 sets required depending on the patient's size and the complexity of the surgery.			
Synulox Antibiotic & Tramadol Pain Relief Injection	\$50	\$50	\$60	\$70
Oral Antibiotics & pain relief	\$50 and above (depending on the animal's weight and the type of medication selected, e.g. liquid or tablet).			
Topical Wound Cleaning Solution	\$8-12	\$8-12	\$12-20	\$12-20
Topical Antibiotic Cream	\$25			
Topical Antibiotic Powder	Additional charges applies			
Pre-anesthetic checkup <i>(A physical check-up on the pet's health condition to understand your pet's health better before the procedure, especially if it is your pet's first visit to the clinic. (Additional charges may be applied for other medications needed based on the diagnosis of the check-up)</i>	\$25			
Estimated total (please note this is an approximate estimate; the final amount may vary):	\$486 and above	\$516 and above	\$560 and above	\$650 and above
Please note that if any abnormalities are found (such as termination of pregnancy or cystic ovaries), or if additional medications are needed, extra charges may apply. Costs may also differ between liquid and tablet medications.	Subject to the complexity of the surgery and type of medication needed.			

Additional recommended items as below:

Post-Surgery Essential:

Elizabeth Collar (This is prescribed after the surgery to prevent infection or opening the stitches caused by licking at the incision site. Other alternatives are not advised.)	\$13-18
--	----------------

Additional Charges:

Pre-Anaesthetic Blood Work (Strongly recommended to enable detection of any pre-existing conditions the pet may have which will potentially increase the risks of anaesthesia, especially in pets over the age of 7 and pets who have never undergone general anaesthesia before.)	\$185-245 or more
IDEXX SNAP 4Dx TEST (Strongly recommended for pets who have not been on tick and flea prevention as well as heartworm protection.)	\$65
COAGULATION PANEL(PT/APPT) (PT-This blood test checks how quickly your pet's blood can clot. It's important before surgery or if we suspect poisoning or bleeding problems, because if the blood doesn't clot properly, even small injuries or operations can become dangerous. APPT-It helps us see if the blood takes too long to clot, which can happen with certain illnesses, medications, or clotting disorders. This is important to know before surgery or if your pet is bleeding. These tests check how well your pet's blood can clot from two different pathways, helping us detect bleeding risks or clotting problems, especially before surgery.)	\$145
